ISMAIL YUSUF COLLEGE OF ARTS COMMERCE AND SCIENCE

Community Education Programe

Report

Title : "Digital Literacy program "

Amrut Anant Masaye

Bachelor of science In Computer science

Academic year 2025 – 2026

Under the Guidance of

Mr .Vikram Pandey

Ismail Yusuf college of Arts science and commerce

Program title : Webdev (web development)

Government of Maharashtra's Ismail Yusuf College of Arts, Science & Commerce

Certificate

I hereby certify that Mr./Ms. _____, Student of _____Institute/college studying in _____ program has completed a C. E. project titled _____ in the area of _____specialization for the academic year 2025-2026. To the best of my knowledge the work of the student is original and the information included in the project is correct.

Internal Guide Head of the Department Principal

Declaration

I, Mr./Ms. _____ Student of _____Institute/college studying in _____program, hereby declare that I have completed the Community Engagement Project titled _____ during the academic year 2025-2026.

The report is original and the information/data included in the report is true emerging from the primary and/ secondary data gathered and analyzed as part of this Community Engagement project.

Due credit is extended on the work of Literature/Secondary Survey by endorsing it in the Bibliography as per prescribed format.

Acknowledgement

We would like to thank everyone who helped us complete our Community Engagement Project at Grow NGO, Jogeshwari.

First, we thank our project mentor and teachers for guiding us and supporting us throughout this project. Their advice and suggestions helped us plan our teaching sessions properly.

We are very thankful to the management and staff of Grow NGO for giving us the opportunity to teach the students. Grow NGO is doing very good work for children. They not only focus on school education, but they also give training in communication skills, spoken English, typing speed improvement, and interview preparation. They teach students how to talk confidently with people, how to speak English properly, and how to prepare for job interviews. This helps students improve their confidence and become ready for future jobs.

We also want to mention that we taught the students for 10 days at the NGO. During these 10 days, we taught them basic HTML and basic CSS. We explained topics step by step and gave live demonstrations. After teaching, we also conducted practical sessions. Students created simple webpages using HTML, and then they applied CSS to design their webpages. We also took a practical exam in HTML and HTML with CSS to check their understanding.

We are very thankful to the students of Grow NGO. They were very interested and eager to learn. Even though many of them were learning coding for the first time, they tried their best in both theory and practical sessions.

We also thank the NGO staff for arranging classrooms and helping us during our sessions. Because of their support, our teaching went smoothly.

Lastly, we thank our team members for working together and completing this project successfully. This experience helped us improve our teaching skills, communication skills, and confidence.

We are truly grateful to Grow NGO for giving us this opportunity.

Abstract

This field visit report presents the planning, execution, and outcomes of a ten-day Web Development Training Program conducted at Grow NGO, Jogeshwari, Mumbai. The program was organized for orphanage and underprivileged students to introduce them to the basics of HTML and CSS. Around 20 25 students participated in the sessions.

The main objective of this initiative was to improve digital literacy and provide students with basic coding knowledge. Many students from disadvantaged backgrounds do not get proper exposure to web development skills. Through this program, we aimed to give them practical understanding of how websites are created and designed.

During the ten days, students were taught HTML fundamentals such as webpage structure, headings, paragraphs, links, lists, and images. After that, they learned basic CSS concepts including text styling, colors, backgrounds, and fonts. The sessions included presentations, live demonstrations, and hands-on practical practice.

At the end of the training, a practical exam was conducted where students created a webpage using HTML and applied CSS styling. Most students were able to complete the task successfully.

This initiative highlights the importance of community-based technical education and shows how basic coding skills can help improve confidence and digital awareness among underprivileged students.

Project over view and key details

Parameter	Details
Program Type	Basic Web Development Training (HTML & CSS)
Training Duration	10 Days (February 2026)
Location	Grow NGO, Jogeshwari, Mumbai
Total Students Reached	20 to 25 Students
Conducted By	Undergraduate Computer Science Students
Academic Supervision	CEP Faculty Guide
Core Topics Covered	HTML Structure, Tags, Links, Images, Lists, CSS Styling, Colors, Fonts
Teaching Approach	PowerPoint Presentations, Live Coding Demonstrations, Hands-on Practice
Practical Assessment	Final Practical Exam (HTML + CSS Webpage Creation)
Pre-Training Coding Knowledge	Most students had little or no prior coding knowledge
Post-Training Outcome	Majority of students successfully created and styled webpages independently
Student Engagement Level	High participation and active involvement during practical sessions

1: Introduction

1.1 Purpose of the Visit

The purpose of the visit was to teach orphanage students at Grow NGO the basics of HTML and CSS. The objective was to provide them with fundamental knowledge of web development and encourage interest in computer science. We wanted to help students understand how websites are created and designed. Another important goal was to improve their confidence in using computers and technology.

Through this 10-day training program, we aimed to give students practical exposure to coding so that they can develop interest in technical fields and explore future career opportunities in IT and web development.

1.2 Background Information

In today's digital world, basic knowledge of coding is essential. However, many underprivileged students lack access to structured computer education. Grow NGO, located in Jogeshwari, works towards the development of children by providing educational support. Through this project, we aimed to bridge the digital knowledge gap by introducing them to website development basics.

1.3 Scope of the Report

This report covers the complete details of the Community Engagement Project conducted at Grow NGO. It includes the teaching plan prepared for the 10-day training program, the methodology used for explaining HTML and CSS concepts, and the tools and resources used during the sessions.

The report also describes student participation, practical sessions conducted daily, and the final practical examination taken at the end of the training. It highlights observations made during the sessions, challenges faced during teaching, and the solutions implemented.

Finally, the report discusses the overall learning outcomes, student performance, and the impact of the project on both the students and the teaching team.

2 : Objectives of the Project

The main objective of this Community Engagement Project was to provide basic knowledge of web development to underprivileged and orphanage students at Grow NGO. Many students from economically weaker backgrounds do not get proper exposure to computer programming and digital skills. Through this project, we aimed to reduce this digital gap by introducing them to HTML and CSS in a simple and practical way.

Another important objective was to help students understand how websites are created and designed. We wanted them to learn the basic structure of a webpage using HTML and how styling is applied using CSS. By giving them hands-on practice, the goal was to make them comfortable with writing and understanding simple code.

The project also aimed to improve digital literacy and technical awareness among students. In today's digital world, having basic computer knowledge is very important for education and future job opportunities. By teaching them web development basics, we hoped to build their interest in computer science and technology-related fields.

Additionally, we wanted to improve students' confidence in using computers. Practical sessions were included so that students could learn by doing, not just by listening. This helped them gain confidence and feel capable of creating something on their own.

3: Literature Review

Various studies suggest that early exposure to computer science improves logical thinking, creativity, and problem-solving skills among students. Learning basic programming concepts at a young age helps students develop analytical thinking and better understanding of technology.

Web development, especially HTML and CSS, is considered one of the easiest and most effective ways to introduce students to coding. HTML helps learners understand the structure of a webpage, while CSS helps in designing and styling it. Together, they provide a strong foundation for further learning in web technologies and software development.

Research also shows that practical-based learning is more effective than only theoretical teaching. When students practice coding by creating real webpages, their understanding improves and they gain confidence. Visual presentations, live demonstrations, and hands-on activities increase student engagement and help in better retention of concepts.

Community-based educational programs have proven to be successful in improving digital literacy among underprivileged children. NGOs and outreach programs play an important role in providing skill-based education to students who may not have access to advanced computer training in schools.

This project aligns with such educational initiatives by focusing on practical skill development. By teaching HTML and CSS at Grow NGO, the project contributed toward improving digital awareness and building basic technical skills among students.

4. Methodology

4.1Approach and Tools Used

The methodology of this project was carefully planned to ensure that students could understand and practice web development concepts easily. Since most of the students had little or no prior knowledge of coding, the teaching approach was kept simple, interactive, and practical.

4.2 The following teaching methods were used:

- PowerPoint Presentations – Used to explain basic concepts clearly with examples and visuals.
- Live Coding Demonstrations – We wrote code in front of students step-by-step so they could understand how it works.
- Practical Hands-on Sessions – Students practiced coding daily on computers after learning each topic.
- Question-and-Answer Sessions – Students were encouraged to ask doubts and interact actively.

4.3 Topics Covered

During the 10-day training program, the following topics were covered:

HTML Topics:

- Introduction to HTML
- Basic structure of a webpage
- Headings and paragraphs
- Lists (ordered and unordered)
- Links and images
- Basic formatting tags

CSS Topics:

- Introduction to CSS

- Applying CSS to HTML
- Text styling
- Colors and background
- Fonts and borders

After completing all topics, a practical examination was conducted. In this exam, students were required to create a simple webpage using HTML and apply CSS styling such as colors, fonts, and background design.

5: Description of Community Interactions, Observations and Analysis

The 10 day timeline was strictly optimized to move students from " absolute beginner" "Beginning professional" .Any deviation was handled through extra doubt – solving session .

Description of Community Interactions, Observations and Analysis

Day-wise Schedule of Activities:

Day	Date	Topic / Activity	Duration
Day 1	10/02/2026	Introduction to VS Code & Basics of Web Technology	1 hrs
Day 2	11/02/2026	Introduction to Programming Concepts & Understanding How Websites Work	1 hrs
Day 3	12/02/2026	Building Logic and understanding HTML	1 hrs
Day 4	13/02/2026	HTML Basics – Tags, Elements, Headings, Paragraphs, Lists	1 hrs
Day 5	14/02/2026	HTML Practical – Creating a Simple Portfolio Webpage	2 hrs
Day 6	15/02/2026	Introduction to CSS – Styling Concepts & Syntax	1 hrs
Day 7	16/02/2026	CSS Practical – Colors, Fonts, Backgrounds & Layout	1 hrs
Day 8	17/02/2026	Combining HTML & CSS – Designing a Simple Webpage	1 hrs
Day 9	18/02/2026	Doubts solving session	2 hrs
Day 10	20/02/2026	Practical Examination Feedback & Closing	2 hrs

6.Day -wise Execution and photos

6.1 day 1 : Introduction to VS Code and Basics of Web Technology

On the first day, students were introduced to Visual Studio Code (VS Code), which is a code editor used for writing programs. We explained its basic features such as creating a new file, saving a file, and writing code inside the editor. Students were guided step-by-step on how to install (if needed) and open VS Code properly.

After that, we introduced the basics of web technology. Students learned what a website is, how websites are created, and how they are displayed in a web browser. We explained simple concepts like web browsers, webpages, and the internet in easy language.

The session helped students understand the basic tools and environment required for web development. Many students were excited to use VS Code for the first time and showed interest in learning more about website creation.

6.2 Day 3: html overview

On the second day, we introduced students to HTML (HyperText Markup Language). We explained what HTML is and how it is used to create the structure of a webpage.

Students learned about the basic structure of an HTML document, including <html>, <head>, <title>, and <body> tags. We also explained how HTML uses tags to display content on a webpage.

A live coding demonstration was given so students could see how a simple webpage is created using HTML. After the explanation, students practiced writing basic HTML code on their own.

Students showed good interest and were excited to create their first simple webpage.

Doubt solving

We kept one separate session to clear students' doubts about HTML. Many students were confused about how tags work, how to close tags properly, and how to add images and links.

We explained everything again in a simple way and showed small examples. We also helped students individually wherever they were facing problems.

After this session, students felt more confident in writing HTML code on their own.

6.3 Day 4: HTML practical and creating a simple portfolio

we told students to do practical work in HTML. They created a simple portfolio webpage about themselves.

In the portfolio, they added their name, introduction, hobbies, and contact details using headings, paragraphs, lists, and images. We guided them wherever they faced problems and helped them correct mistakes.

This practical session helped students understand HTML better and they enjoyed creating their own webpage.

6.4 Day 5: Introduction of css and his types

we taught students what CSS is and why it is used. We explained that CSS (Cascading Style Sheets) is used to design and style a webpage.

We also taught the three types of CSS:

- **Inline CSS**
- **Internal CSS**
- **External CSS**

We explained each type with simple examples and showed how they are used in an HTML file. Students tried small examples to understand the difference between them.

By the end of the session, students understood how CSS makes a webpage look more attractive

6.5 Day 6 : CSS Practical – Color, Font, Background and Layout

On Day 6, we conducted a CSS practical session. Students practiced applying different CSS properties to their HTML webpages.

They learned how to change text color, background color, and font style and size. We also showed them how to adjust basic layout like text alignment and spacing.

Students modified their previous HTML portfolio pages by adding styling. They enjoyed seeing how their webpage looked more attractive after applying CSS.

This practical session helped them understand styling concepts clearly and improved their confidence.

6.6 Day 7 Combine HTML and css Designing a simple webpage

students combined HTML and CSS to design a complete webpage. They used HTML to create the structure and CSS to style it.

Students worked on improving their portfolio webpage by adding colors, fonts, background styles, and proper alignment. We guided them wherever needed and helped them improve the layout.

By the end of the session, most students were able to create a simple and properly designed webpage on their own. They were happy to see their final output.

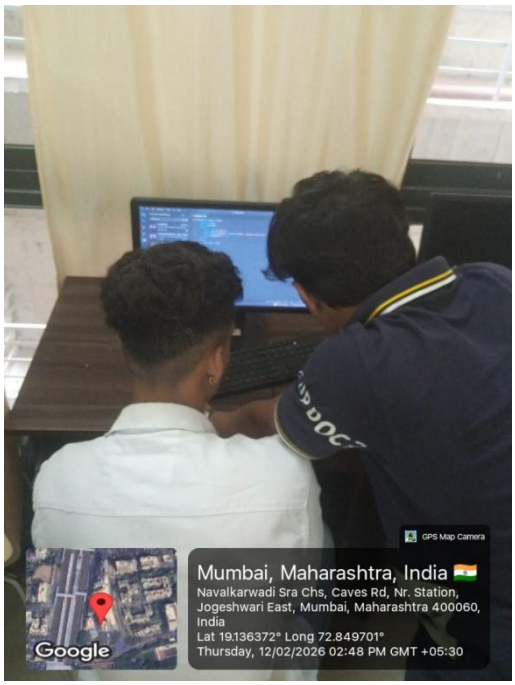

6.7 Day 8 : Doubt Solving Session

we kept a doubt solving session for students. They asked questions about HTML and CSS topics which they did not understand properly.

Some students were confused about tags, styling, and layout. We explained the concepts again in a simple way and showed small examples.

We also gave them extra practice and helped them individually wherever needed. This session made students more confident before the final practical exam.

6.8 Day 9: final Practical Examination on html and css

we conducted the final practical examination. Students were asked to create a simple webpage using HTML and apply CSS styling to it.

They had to include headings, paragraphs, lists, links or images, and use CSS for colors, fonts, and background. The exam was conducted to check their understanding of both HTML and CSS.

Most students were able to complete the task successfully. This exam helped us evaluate their learning and progress during the training.

7 : Outcome and Impact of the Project

Outcome

The 10-day HTML and CSS training program produced positive results. By the end of the sessions, most students were able to understand the basic structure of a webpage and write simple HTML code on their own. They also learned how to apply CSS styling such as colors, fonts, and backgrounds.

Students successfully created a simple portfolio webpage during the practical sessions and final examination. This showed that they were able to apply what they learned during the training.

Another important outcome was the improvement in students' confidence. At the beginning, many students were hesitant and unsure about coding. However, by the end of the program, they were comfortable using VS Code and writing basic code independently.

Impact

The project had a meaningful impact on the students of Grow NGO. It increased their digital awareness and introduced them to the field of web development. Many students showed interest in learning more about coding and technology in the future.

The training also helped students understand that website creation is not very difficult if learned step by step. This changed their mindset and reduced fear related to programming.

For the teaching team, this project improved communication skills, leadership abilities, and teaching experience. It strengthened the connection between academic learning and community service.

Overall, the project created a positive educational impact by promoting technical learning and encouraging students to explore digital skills for their future growth.

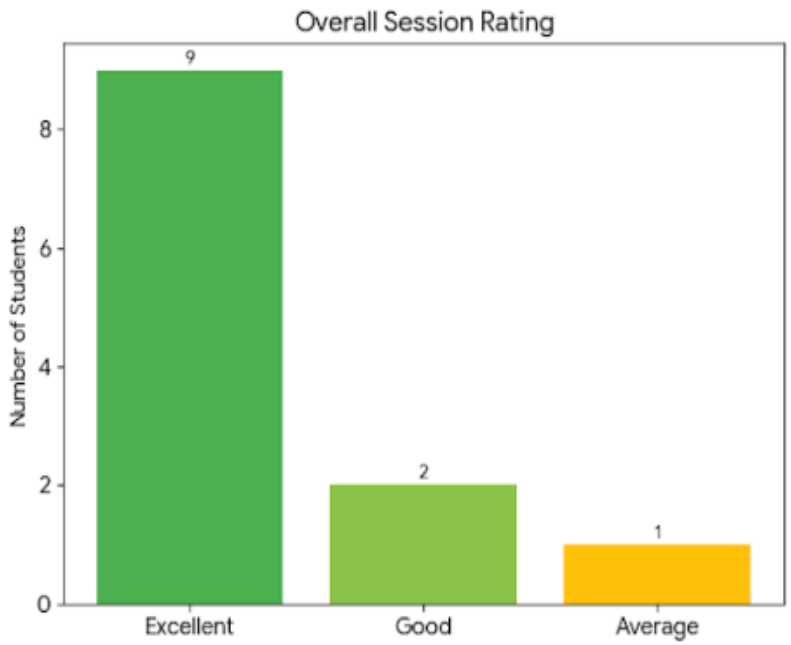

8 : Data Analysis

8.1 Overall Satisfaction

The sentiment is overwhelmingly positive. Most students walked away very happy with the session.

- Excellent: 9 students (75%)
- Good: 2 students (17%)
- Average: 1 student (8%)

Takeaway: With 92% rating the session as "Good" or "Excellent," the content and delivery are clearly hitting the mark.

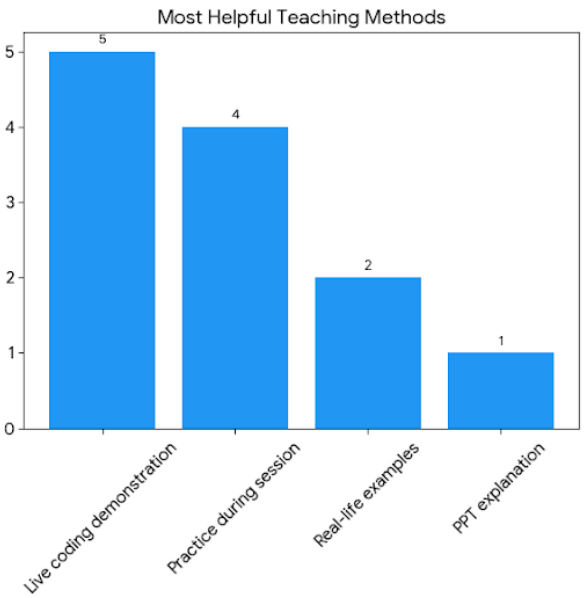

8.2 Learning outcome

Confidence Level	Count	Percentage
Can create simple webpage independently	7	58%
Can create with little help	4	33%
Understands theory but needs help coding	1	9%

8.3 Effectiveness of Teaching Methods

Students identified what helped them learn the most. "Live" and "Practical" methods won by a landslide.

1. Live Coding Demonstrations**:** 5 votes (42%)
2. Practice During Session: 4 votes (33%)
3. Real-life Examples: 2 votes (17%)
4. PPT Explanation: 1 vote (8%)

Observation**:** Theoretical teaching (PPT) was the least popular. The students clearly prefer active learning—watching it happen in real-time and doing it themselves.

8.4 Demographics (Age)

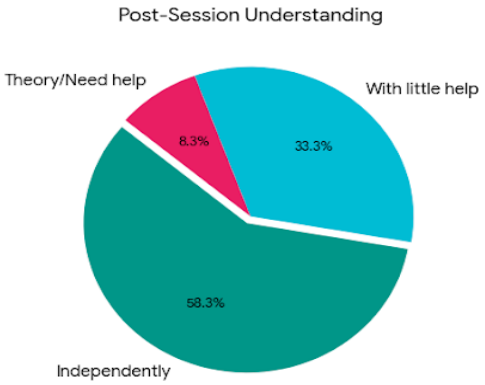

The group is quite young and focused, primarily in the late-teen to early-adult range.

- Range: 18 to 25 years old.
- Average Age: ~20 years old.
- Mode (Most common): 20 years old (6 students).

8.5 Qualitative Feedback Highlights

The "Honest Feedback" column reinforces the numbers with some specific praise:

- Interactivity: Multiple students mentioned that the session was "interacting" and that the instructors were "comfortable" to be around.
- Simplicity: Kunal Vishwakarma noted the teaching was "in a very simple way," which is crucial for basics.
- Practical Focus: Prachi Tekale specifically highlighted that the "practical sessions are very good."

8.6 Feedback

Enter your name.	What is your age ?	How would you rate the overall HTML session?	After the session, how well do you understand HTML basics?	Which teaching method helped you most?	Any honest feedback by your side ?
Santosh Mandal	20	Excellent	I can create a simple webpage independently	Practice during session	Nice session thankyou for teaching us
Bilkul shaikh	20	Excellent	I can create a simple webpage independently	Live coding demonstration	Excellent teaching
Harsha Shetty	19	Excellent	I can create with little help	Practice during session	It helped me in understanding the concept of coding and creating a website. Thank you.
Rani kanki	20	Excellent	I can create a simple webpage independently	Live coding demonstration	Very nice.
Omkar sakpal	21	Average	I can create with little help	Real-life examples	No
Kunal Vishwakarma	25	Excellent	I can create a simple webpage independently	PPT explanation	The Are Teaching in Very simple way
Krushnali Harer	20	Excellent	I can create a simple webpage independently	Live coding demonstration	It was good session the students were easily interacting with each others
Shreya Naik	20	Excellent	I can create a simple webpage independently	Live coding demonstration	It was good session and interacting
Janhvi	19	Good	I can create with little help	Practice during session	The session and practical learning was good
Khan Zaiba	19	Excellent	I can create with little help	Live coding demonstration	You guys war very nice and comfortable with us
Prachi tekale	18	Good	I understand theory but need help in coding	Practice during session	I really like The way they teach and all practical sessions are very good
Ansari Shahnawaz	20	Excellent	I can create a simple webpage independently	Real-life examples	Thank you to giving me this opportunity I learned properly Basic HTML And Nice teaching thanking you

9:Personal learning experience

This Community Engagement Project was a great learning experience for me. Teaching HTML and CSS to students helped me improve my own understanding of the concepts. When I explained topics to students, I realized that teaching makes our basics stronger.

I also improved my communication skills during this project. At the beginning, it was little difficult to explain technical topics in simple words, but slowly I became more confident. Interacting with students helped me develop patience and leadership qualities.

I learned how to manage time, plan sessions properly, and handle different types of learners. Some students understood quickly, while others needed more support. This experience taught me how to adjust my teaching method according to the students.

Overall, this project helped me grow both technically and personally. It increased my confidence and gave me satisfaction that I was able to help students learn something new.

References

- Study materials on HTML and CSS
- Online resources such as W3Schools
- Class notes and presentation slides prepared for teaching
- Basic web development tutorials and documentation

10: Conclusion

The Community Engagement Project conducted at Grow NGO was successful in achieving its main objective of teaching basic HTML and CSS to orphanage and underprivileged students. Over the 10-day training program, students learned how to create and design simple webpages using HTML for structure and CSS for styling.

Most students had little or no prior knowledge of coding at the beginning of the program. However, by the end of the training, they were able to independently create a basic webpage and apply styling such as colors, fonts, and background. This shows that the teaching methods used during the sessions were effective.

The project not only improved students' technical knowledge but also increased their interest in learning more about computer science. It helped enhance digital awareness and boosted their confidence in using technology. The practical sessions played a very important role in improving their understanding.

Overall, the project was a valuable experience for both the students and the teaching team. It strengthened community engagement and promoted skill-based learning.

Key Findings

- Students showed strong interest and curiosity in learning coding.
- Practical and hands-on teaching methods improved their understanding.
- Even students with no prior coding knowledge were able to create simple webpages.
- Regular practice helped students gain confidence in writing code independently.
- Interactive sessions increased student participation and engagement.
